

Chapter 1 · Introduction to Science

Science is the systematic study of the structure and behaviour of the physical and natural world through observation and experiment. In this chapter we will explore what makes a question scientific and how scientific knowledge is built over time.

Chapter 2 · Materials and Their Properties

Materials can be classified based on their properties such as hardness, transparency, solubility, and conductivity. Understanding these properties helps us choose the right material for the right purpose.

Chapter 3 · Motion and Force

An object is said to be in motion if its position changes with respect to a reference point over time. Force is any push or pull that can change the state of motion of an object.
